# Siding Color Options

## PSC offers two options for siding colors:

1. Siding that is primed at the James Hardie factory and then painted on-site after installation.
2. ColorPlus® Technology siding, where the siding is primed and the color finish is factory applied, multi-coated, and baked on for maximum durability.

## Primed & Painted

Siding that is primed at the factory can be painted with most any custom paint color. We have a wide-variety of paint colors available from many different paint manufacturers. With custom color matching technologies, we can also match almost any existing color that you desire.

## ColorPlus® Technology

Make your house the talk of the block with color. For lasting color, only James Hardie's exclusive ColorPlus Technology provides color you can count on.

ColorPlus combines distinct beauty and high-performance in a way that no other finish does. It's also optimally formulated for use with fiber cement.

When you invest in ColorPlus Technology, you're getting a consistent coat of a proprietary finish that was baked-on in closely controlled factory conditions that results in even coverage that will last for years and years.

The ColorPlus Technology palette contains a variety of gorgeous, well-edited colors curated by our color experts. Instead of feeling overwhelmed by choices, you're empowered by our tried-and-true options.
